DETAILED ACTION

EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 5 line 1, please change "claim 4" to – claim 1 –.

Allowable Subject Matter

2. Claims 1, 3 and 5-11 are allowed.

3. The following is an examiner's statement of reasons for allowance:

Claims 1, 3 and 5; prior art fails to disclose or suggest, inter alia, a voltage regulator having a microcontroller generating a first PWM signal with a first duty cycle for generating a charging current to charge a capacitor until the capacitor has a voltage smaller than a threshold voltage and the microcontroller generates a second PWM signal with a second duty cycle to charge the capacitor when the capacitor has a voltage between the threshold voltage and a maximum voltage; wherein the first duty cycle is greater than the second duty cycle.

Claims 6-10; prior art fails to disclose or suggest, inter alia, a method for operating a voltage regulator comprising providing a first pulse signal with a first duty cycle to a transformer

until the capacitor has a voltage reaching a maximum voltage when the capacitor has a voltage smaller than a threshold voltage; and providing a second pulse signal with a second duty cycle to the transformer until the capacitor has a voltage reaching the maximum voltage by the charging current when the capacitor has a voltage between the threshold voltage and the maximum voltage, wherein the first duty cycle is greater than the second duty cycle.

Claim 11; prior art fails to disclose or suggest, inter alia, a method for operating a voltage regulator for providing a charging current to a capacitor, comprising comparing a voltage of the capacitor with a threshold voltage; adjusting a duty cycle of a pulse signal according to a comparing result of the voltage of the capacitor with the threshold voltage; and providing the pulse signal to a transformer until the capacitor has a voltage reaching a maximum voltage, and wherein the pulse signal provided to the transformer has a first duty cycle when the capacitor has a voltage smaller than the threshold voltage and the transformer has a second duty cycle smaller than the first duty cycle when the capacitor has a voltage between the threshold voltage and the maximum voltage.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
